

Product Guide Sheet

Heavy Duty Crane Slung Drum Rotator

Our Heavy Duty Drum Rotators offer the controlled pouring of the DTR Range yet also the capacity to handle heavy loads such as powder/scrap/lead or steel filled drums. A heavy duty steel girdle is fitted with two over centre clamps ensures the drum is gripped firmly at all times.

*Our heavy Duty Drum Rotator can be operated by the following means;
In Order to pick up a drum, set the girdle to the horizontal position and position the yoke so as the girdle is approximately in between the drums centre rolling hoops. Close the girdle around the drum and secure tightly via the over centre steel clamps. Lifting can now commence, once the drum is at pouring height simply use the crank handle or chain loop to pour the contents in a controlled manner.*

Model Ref.	Capacity	Max Fork Size	Method of Operation	Drum Type	Weight
DTR-3-1000	1000kgs	140x50mm	Crank Handle	1	120kgs
DTR-4-1000	1000kgs	140x50mm	Loop Chain	1	126kgs
